

**Description**

The practice site for the scenario is Shoreline Pediatrics. The EHR vendor loads demographic data and clinical history for twin Juana Maria Gonzales.

**Comments**

Set-up step evaluating EHR functions for capturing and storing patient pediatric demographic data, historical immunizations, and clinical conditions. There is no transaction associated with this test step.

**Pre-condition**

No Pre-Condition

**Post-Condition**

The EHR has recorded all of the pediatric demographic data, historical immunizations, and clinical conditions in the record created for Juana Maria Gonzales using the test data provided.

**Test Objectives**

**Register New Patients:** The EHR or other clinical software system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. The EHR or other clinical software system must be able to store information to successfully match with patients in immunization registries, if the information is available. Specific to immunization registries, that information includes the mother's maiden name, whether the patient was part of a multiple birth, and the birth order (i.e., ordinal number of birth, first, second, etc.). This information allows the provider to correctly identify the patient and also helps ensure a match when the EHR sends the patient's information to external systems such as an immunization registry.

**Evaluation Criteria**

Evaluation criteria is defined within each test step.

**Notes**
