

**Description**

A mapping error in the IIS software results in the IIS being unable to recognize the administration site sent in RXR-2 even though it is valid. The acknowledgement message returned contains a warning for an invalid value.

**Comments**

No Comments

**Pre-condition**

A VXU message is generated by the EHR.

**Post-Condition**

No PostCondition

**Test Objectives**

Support for accepting an acknowledgement message with a warning being returned by the IIS and to display some notification to an end user.

**Evaluation Criteria**

The warning returned in the acknowledgement message is visible in the system responsible for the content of the administration message.

**Notes**

**Important note regarding the MSH-10 and MSA-2:** The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.
