

Description

The provider enters vaccine inventory data from available inventory.

Comments

2D barcodes are provided as an option to enter the inventory.

Pre-condition

No Pre-Condition

Post-Condition

Vaccine inventory is recorded and available in the EHR.

Test Objectives

Update Vaccine Inventory from Stock Receipt: The EHR or other clinical software system updates the vaccine inventory when new stock is received at the site and updates the correct count of each vaccine, including those for use in guarantee programs (such as Vaccines for Children) and for private stock.

Display Available Vaccine Antigens: The system presents a list of vaccine antigens available for administration to patients (i.e., private stock vs. specific guarantee program).

Evaluation Criteria

Evaluation criteria is defined within each test step.

Notes

Vendors are encouraged to scan the 2D barcode images as data input. If vendors use a 2D barcode scanner it is expected that at least one vaccine product into the system's inventory. Tester should document feedback and any identified issues with 2D barcode images.
