

Description

The provider receives a vaccine delivery and records the new vaccine data in available inventory.

Comments

Set-up step evaluating EHR functions for capturing and storing vaccine inventory data.

Pre-condition

No Pre-Condition

Post-Condition

Vaccine inventory is recorded and available in the EHR.

Test Objectives

Update Vaccine Inventory from Stock Receipt: The EHR or other clinical software system updates the vaccine inventory when new stock is received at the site and updates the correct count of each vaccine, including those for use in guarantee programs (such as Vaccines for Children) and for private stock.

Notes

Vendors are encouraged to scan the 2D Barcode images as data input. Tester should document feedback and any identified issues with 2D Barcode images.

A GTIN for Pfizer-BioNTech COVID-19 Vaccine (PURPLE CAP) (NDC: NDC 59267-1000-01) had not yet been assigned at the time this test plan was generated. A GTIN was generated for the purpose of this test according to GS1 standards and may be updated in the future should this be changed in IIS: NDC Lookup Crosswalk published by CDC. The lack of an assigned GTIN also means a GS1 DataMatrix (2D barcode) was not created for this test plan. Vendors must therefore hand enter this vaccine information.

Because the influenza season may not align with the test plan execution, the most current influenza vaccine may not be present.

The new vaccine information needs to be added before inventory can be added for a specific vaccine.
