# HIMSS Immunization Integration Program CDC Test Plan v7.6

This test plan is to be used for the testing of the CDC EHR Immunization Related Requirements developed under Contract-No: 200-2014-60994 . All test cases are required to be executed. The test plan includes both functional and interoperability tests including Vaccine Update Notifications (HL7 V2.5.1 VXU/Z22) and Query and Response (Evaluated History and Forecast Group Z44/Z42). This version is updated for use in the 2018 test cycle. It is aligned with ONC 2015 Certification Criteria for § 170.315(f)(1) Transmission to Immunization Registries. This test plan is approved by ONC to demonstrate conformance to this criteria.

## 1. Initial Data Load

The initial data load will consist of the vendor entering data during live interactive testing for 4 patients with various scenarios. The data entry will include demographic data, Immunization histories and specific conditions for each patient. The initial data load will also populate the inventory used in the use case.

## 1.1. Juana Mariana Vazquez Initial Data Load

Demonstrates the ability to record pediatric demographic data, historical vaccinations, and clinical conditions for a school-aged child Juana Mariana Vazquez. There are no transactions associated with this test case.

### Test Story

#### Description

The practice site for the scenario is Shoreline Pediatrics. The EHR vendor loads demographic data and clinical history for Juana Mariana Vazquez. The data includes immunizations provided by the practice.

The vendor also enters:

-Two vaccines administered at other sites

1. an influenza vaccine given at a local pharmacy
2. an inactivated polio vaccine given elsewhere and not reported to the registry - the history includes an adverse reaction (febrile seizure) 8 hours after the vaccine was administered

- Adverse reaction to inactivated polio vaccine (febrile seizure) and the date and source of information

NOTE: the historical vaccines will be imported during the Registry query (e.g. from another practice)

#### Comments

Set-up step evaluating EMR functions for capturing and storing patient pediatric demographic data, historical immunizations, and clinical conditions. There is no transaction associated with this test step.

#### Pre-condition

No PreCondition

#### Post-Condition

The EMR has recorded all of the pediatric demographic data, historical immunizations, and clinical conditions in the record created for Juana Mariana Vazquez using the test data provided.

#### Test Objectives

**Register New Patients:** The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.

**Record Past Immunizations:** The EHR or other clinical software system allows providers to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.

**Request/Receive Patient Immunization Data and Identify Source:** The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

#### Supporting data for:

**Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History:** The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information.

**Identify Adverse Event:** The EHR or other clinical software system enables capture of structured data regarding adverse events.

#### Evaluation Criteria

Evaluation criteria is defined within each test step.

#### Notes

### 1.1.1. Enter Initial Demographic Data for New Patient Juana Mariana Vazquez

#### Notes

Publicity Code is included in order to support documentation of communication method for the TestCaseGroup:Cohort Report. If the EMR does not support this attribute, the result for this step may indicate pass, but the lack of support should be documented as a notable exception.

The date/time of birth for the twins includes birth time. This aids in distinguishing the birth order for multiple births. Since this patient is not a multiple birth, the vendor can pass with notable exception if the birth date/time does not include precision of birth time. The notable exception should document the lack of support for birth time.

While the PID indicates that it is Vendor Supplied, the ID returned from the registry query is: 123456^^^MYEHR^MR~987633^^^MYIIS^SR. The IIS will not know the PID of the local system, and there is no context-based validation checking for the PID.

## 1.1.2. Enter Initial Immunization Data for Juana Mariana Vazquez: Immunizations from practice

Test Step Type: SUT MANUAL

Patient History from the local practice is entered into the EMR.

### Test Story

#### Description

The EHR vendor loads immunization history data from the local practice for Juana Mariana Vazquez. This includes an MMR dose that was given too early. This MMR dose serves to seed checking for dose given too early in TestCaseGroup: Juana Mariana Vazquez Visit, TestCase: Query the Registry for Juana Mariana Vazquez, TestStep: Mark first MMR Dose as Invalid.

#### Comments

No Comments

#### Pre-condition

The EMR has recorded all of the pediatric demographic data in the record created for Juana Mariana Vazquez.

#### Post-Condition

The immunization history known to the local practice is loaded into the record created for Juana Mariana Vazquez.

#### Test Objectives

**Record Past Immunizations:** The EHR or other clinical software system allows providers to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.

**Request/Receive Patient Immunization Data and Identify Source:** The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

Supporting data for:

**Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History:** The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information.

**Receive Dose Not Indicated Alert for Single Vaccine Order:** The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.

#### Evaluation Criteria

Evaluation Criteria: Vendor successfully records all immunization data known to the local practice as provided, with all required attributes indicated by [Y]. The coded values are not expected to be displayed to the user, but it is expected that the value selected has the identified meaning, and it is expected that the system will use the coded value when the attribute is conveyed in later transactions:

#### Notes

The MMR dose serves to seed checking for dose given too early in TestCaseGroup: Juana Mariana Vazquez Visit, TestCase: Query the Registry for Juana Mariana Vazquez, TestStep: Mark first MMR Dose as Invalid.

The EMR does not need to specify a 'new immunization', as long as there is a way to indicate that it is a new immunization within the EMR, this is acceptable (e.g. the default interpretation of the data entry is that it is a new immunization and not historical).

### 1.1.3. Enter Initial Immunization Data for Juana Mariana Vazquez from Another Practice

Test Step Type: SUT\_MANUAL

Patient History from another practice is entered into the EMR.

#### Test Story

<b>Description</b>
The EHR vendor loads immunization history data from another practice into the record for Juana Mariana Vazquez.
<b>Comments</b>
No Comments
<b>Pre-condition</b>
The EMR has recorded all of the pediatric demographic data in the record created for Juana Mariana Vazquez.
<b>Post-Condition</b>
The immunization history from another practice is loaded into the record created for Juana Mariana Vazquez.
<b>Test Objectives</b>
<b>Record Past Immunizations:</b> The EHR or other clinical software system allows providers to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.
<b>Request/Receive Patient Immunization Data and Identify Source:</b> The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.
Supporting data for:
<b>Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History:</b> The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information.

## 1.2. Juan Marcel Marina Initial Data Load

Demonstrates the ability to record pediatric demographic data, historical vaccinations, and clinical conditions for 1 1/2-year old Juan Marcel Marina. There are no transactions associated with this test case.

### Test Story

#### Description

The practice site for the scenario is Shoreline Pediatrics. The EHR vendor loads demographic data and clinical history for Juan Marcel Marina. The data includes a clinical history of varicella, and serological evidence of Hepatitis A immunity.

#### Comments

Set-up step evaluating EMR functions for capturing and storing patient pediatric demographic data, historical immunizations, and clinical conditions. There is no transaction associated with this test step.

#### Pre-condition

No PreCondition

#### Post-Condition

The EMR has recorded all of the pediatric demographic data, historical immunizations, and clinical conditions in the record created for Juan Marcel Marina using the test data provided.

#### Test Objectives

**Register New Patients:** The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.

Supporting data for:

**Modify Antigen Recommendations Based on Active Diagnoses:** *The system notifies the provider of any conflicts between recommended vaccines in the updated forecast and the patient's current or historical diagnoses.*

#### Evaluation Criteria

Evaluation criteria is defined within each test step.

#### Notes

Publicity Code is included in order to support documentation of communication method for the TestCaseGroup:Cohort Report. If the EMR does not support this attribute, the result for this step may indicate pass, but the lack of support should be documented as a notable exception.

The date/time of birth for the twins includes birth time. This aids in distinguishing the birth order of the twins, but as long as birth order is supplied, the vendor can pass with notable exception if the birth date/time does not include precision of birth time. The notable exception should document the lack of support for birth time.

While the PID indicates that it is Vendor Supplied, the ID returned from the registry query is: 123456^^^MYEHR^MR~987633^^^MYIIS^SR. The IIS will not know the PID of the local system, and there is no context-based validation checking for the PID.

Protection Indicator Effective Date may use current date if constrained by EMR workflow.

Document in notable exceptions where Birth Address can not be captured/recorded by product.

## 2. Juana Mariana Vazquez Visit

Juana Mariana Vazquez visits the provider where her immunization history is retrieved from the registry and reconciled with the local information in the medical record to determine vaccines that are due. Vaccinations are ordered and administered. The parents refuse the Polio vaccine due to prior issues. The vaccines are reported to the immunization registry and a vaccine summary is available for the patient.

## 2.1. Query the Registry for Juana Mariana Vazquez

EMR generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juana Mariana Vazquez. The Z42 response is used to display, reconcile, and update the immunization information in the EMR.

### Test Story

#### Description

The EMR generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juana Mariana Vazquez. Querying the registry will consist of the vendor creating Z44 messages for Juana Mariana Vazquez to be sent to the registry. The response will be processed as part of the 'Display, Reconcile, Import and Update Immunization Information' activity.

Using the Z42 Response to Immunization Registry Query, the EMR displays the Evaluated History and Forecast to the user for reconciliation and update. The vendor will receive information back from the registry and show the ability to view and reconcile, and import the information returned by the registry (NOTE: the Z42 message will be provided either manually, or as part of the tool). This test will also look at the system's ability to view the forecast returned by the registry, and create a new forecast after reconciling the information.

#### Comments

No Comments

#### Pre-condition

Juana Mariana Vazquez is entered as a patient in the EMR with complete Demographic data, Immunization History Data, and Clinical Data according to the steps in the 'Juana Mariana Vazquez Initial Data Load'

#### Post-Condition

A Z44 Query is generated and submitted to the Immunization Registry/Test tool, and a Z42 response is returned.

#### Test Objectives

**Select New Patient:** The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.

**Real Time Request/Receive Patient Immunization History:** The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (QBP/RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

**Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History:** The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information.

**Request/Receive Patient Immunization Data and Identify Source:** The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

**View Immunization Forecast:** The system provides a view of the immunization forecast provided by the public health immunization registry (IIS). The display includes the forecast from the registry and includes recommended vaccination dates, minimum (earliest) date, date due, and maximum (latest) date for each vaccine included in the forecast.

**View Reconciled Immunization Forecast:** The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.

**Review Patient Immunization History:** To assist with the ordering process, the EHR or other clinical software system allows a user to specify standard views of patient immunization information for each vaccine dose administration, including patient-specific data (e.g., age on dates of administration, etc.).

**Record Past Immunizations:** The EHR or other clinical software system allows providers to enter information about immunizations given elsewhere (e.g., by another doctor, at a public health clinic, pharmacy, etc.) with incomplete details.

#### Support for:

**Receive Dose Not Indicated Alert for Single Vaccine Order:** The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.

#### Evaluation Criteria

Evaluation criteria is defined within each test step.

### Test Story

#### Description

The Immunization Registry returns an Evaluated History and Forecast (Z42) to the EMR in response to the query for patient (Juana Mariana Vazquez). The provider reviews the immunization history from the registry and compares to the immunization history in the EMR. The provider reviews the information from these sources, identifying information known only to the registry, and identifying information that is more accurately reflected in the local EMR:

The physician accesses the record for Juana Mariana Vazquez and the EHR Differentiates:

The following vaccinations are available only to the EMR:

- diphtheria, tetanus toxoids and acellular pertussis vaccine, 5 pertussis antigens (CVX 106) administered 11/20/2016

#### Pre-condition

Juana Mariana Vazquez Initial Data Load is completed.

Juana Mariana Vazquez is the active working patient in the EMR.

A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR.

#### Post-Condition

Evaluated Immunization History returned from the registry is reviewed and compared to the immunizations in the patient record (Juana Mariana Vazquez)

#### Test Objectives

**Real Time Request/Receive Patient Immunization History:** The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

**Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History:** The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information.

**Review Patient Immunization History:** To assist with the ordering process, the EHR or other clinical software system allows a user to specify standard views of patient immunization information for each vaccine dose administration, including patient-specific data (e.g., age on dates of administration, etc.).

#### Support for:

**Receive Dose Not Indicated Alert for Single Vaccine Order:** The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.

#### Evaluation Criteria

1. The EMR is able to receive the response from the Immunization Registry.
2. The EMR displays the information returned from the Immunization Registry according to the Juror Document.
  - Complete review for Polio administered 3/23/2013, MMR 8/22/2013
  - remaining vaccines may be reviewed only for the vaccine name and date administered
3. The EMR is able to differentiate the vaccines in the comparison between the EHR and the vaccination history

#### Notes

The juror document also contains the verification content for the immunization forecast, which is tested and graded separately at step 5: View the vaccination history for Juana Mariana Vazquez. The criteria for this step is tested separately here and graded only with respect to the vaccine history.

Visualization of the adverse reaction for the Polio Vaccine in the history returned from the IIS is an advanced function. The adverse event is returned in the message and may be displayed during comparison by the EMR, but it is not listed in the Juror document.

The EMR must minimally display the vaccine administered and the date of the immunization.

**DISPLAY VERIFICATION**

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.

## 2.1.4. Mark first MMR Dose as Invalid

Test Step Type: SUT\_MANUAL

Identify the first MMR dose which is given too early, as invalid. If the EHR does not already flagged the first MMR as invalid, the provider updates the first MMR to indicate it is "invalid" as it was given too early (as notified by the registry).

### Test Story

#### Description

If the EHR does not already flag the first MMR as invalid, the provider updates the first MMR to indicate it is "invalid" as it was given too early (as notified by the registry)

#### Comments

If the EMR already recognizes the dose as invalid, then this step may be skipped.

#### Pre-condition

Initial Data Load -

Step 2: Enter Initial Immunization Data for Juana Mariana Vazquez: Immunizations from practice

#### Post-Condition

MMR status for the first MMR dose is set to invalid.

#### Test Objectives

dose validity is an important aspect of:

**View Reconciled Immunization Forecast:** The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.

#### Evaluation Criteria

Evaluation Criteria: The vendor is able to record that the first MMR vaccination dose is invalid with a reason that it was given too early, and therefore the dose administered on 11/22/2017 should indicated dose '1'.

**Notes**

In the steps that follow, the MMR returned from the registry will be imported and the vaccine forecasting steps will further verify the correct documentation of the dose that will be imported from the registry as dose '1'.

## 2.1.5. View the vaccination forecast for Juana Mariana Vazquez

Test Step Type: TA\_RESPONDER

Vendor can successfully display the current Immunization Forecast (vaccination names and recommended vaccination dates) as returned by the Registry (Z42).

### Test Story

<b>Description</b> The physician accesses the record for Juana Mariana Vazquez and: - Displays the registry forecast as returned by the immunization registry
<b>Comments</b> No Comments
<b>Pre-condition</b> A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR.
<b>Post-Condition</b> Immunization Forecast returned from the registry has been displayed to the user.
<b>Test Objectives</b> <i>View Immunization Forecast:</i> The system provides a view of the immunization forecast provided by the public health immunization registry (IIS). The display includes the forecast from the registry and includes recommended vaccination dates, minimum (earliest) date, date due, and maximum (latest) date for each vaccine included in the forecast.
<b>Evaluation Criteria</b> 1. The EMR displays the information returned from the Immunization Registry according to the Juror Document. 2. Verify that all forecast vaccines and dates returned by the registry are displayed to the user.
<b>Notes</b>  The verification content for the vaccine forecast also is part of the juror document in the prior step 3: View and Compare response to request for vaccination history for Juana Mariana Vazquez. The criteria for this step is tested separately here and graded only with respect to the vaccine forecast. Date when Vaccine Overdue may be omitted for the Influenza Vaccine.  For MMR, the 2nd dose is due 10/31/17 according to the schedule. Since the first one was given too early, the child is behind. Verify that the EMR shows all 3 dates returned by the registry: - Earliest Date to Give - Vaccine Due Date - Date When Vaccine Overdue

## DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.

## 2.1.6. Reconcile and import vaccinations from Evaluated History and Forecast for Juana Mariana Vazquez

Test Step Type: SUT\_MANUAL

The Provider uses the EMR to compare the immunization history results (Z42) returned by the Immunization Registry in response to the Z44 Query with the immunization history in the local system, and reconcile (import/update) records.

### Test Story

<b>Description</b>
Juana Mariana Vazquez immunization registry provided Evaluated History and Forecast is reconciled with the Immunization history information in the EMR.
<b>Comments</b>
No Comments
<b>Pre-condition</b>
A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR and the response is available in the EMR for reconciliation and import.
<b>Post-Condition</b>
Evaluated Immunization History returned from the registry is reconciled and imported into the patient record (Juana Mariana Vazquez)
<b>Test Objectives</b>
<b>Request/Receive Patient Immunization Data and Identify Source:</b> The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.
<b>Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History:</b> The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information.
<b>Review Patient Immunization History:</b> To assist with the ordering process, the EHR or other clinical software system allows a user to specify standard views of patient immunization information for each vaccine dose administration, including patient-specific data (e.g., age on dates of administration, etc.).
<b>Support for:</b>
<b>Receive Dose Not Indicated Alert for Single Vaccine Order:</b> The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.
<b>Evaluation Criteria</b>
1. The user imports the vaccination, date administered, and documents adverse reactions reconciled from the returned vaccinations as follows: <b>a. Vaccinations NOT imported:</b> hepatitis B vaccine, pediatric or pediatric/adolescent dosage (CVX 45) administered 12/20/2013 measles, mumps, and rubella virus vaccine (CVX 03) administered 8/22/2014 diphtheria, tetanus toxoids and acellular pertussis vaccine, 5 pertussis antigens (CVX 106) administered 11/20/2017 [known only to EMR, not available from IIS] poliovirus vaccine, inactivated (CVX 10) administered 2/21/2015 [known only to EMR, not available from IIS] Influenza, injectable, quadrivalent, preservative free, pediatric (CVX 140) administered 10/15/2017 [known only to EMR, not available from IIS]
<b>b. Vaccinations Imported:</b> hepatitis B vaccine, pediatric or pediatric/adolescent dosage (CVX 08) administered 11/01/2013 hepatitis B vaccine, pediatric or pediatric/adolescent dosage (CVX 08) administered 05/20/2014  diphtheria, tetanus toxoids and acellular pertussis vaccine, 5 pertussis antigens (CVX 106) administered 1/22/2014 diphtheria, tetanus toxoids and acellular pertussis vaccine, 5 pertussis antigens (CVX 106) administered 3/23/2014 diphtheria, tetanus toxoids and acellular pertussis vaccine, 5 pertussis antigens (CVX 106) administered 5/22/2014 diphtheria, tetanus toxoids and acellular pertussis vaccine, 5 pertussis antigens (CVX 106) administered 2/21/2015  Haemophilus influenzae type b vaccine, PRP-OMP conjugate (CVX 49) administered 1/22/2014 Haemophilus influenzae type b vaccine, PRP-OMP conjugate (CVX 49) administered 3/23/2014 Haemophilus influenzae type b vaccine, PRP-OMP conjugate (CVX 49) administered 5/22/2014 Haemophilus influenzae type b vaccine, PRP-OMP conjugate (CVX 49) administered 11/21/2014  poliovirus vaccine, inactivated (CVX 10) administered 1/22/2014 poliovirus vaccine, inactivated (CVX 10) administered 3/23/2014  pneumococcal conjugate vaccine, 13 valent (CVX 133) administered 1/22/2014 pneumococcal conjugate vaccine, 13 valent (CVX 133) administered 3/23/2014 pneumococcal conjugate vaccine, 13 valent (CVX 133) administered 5/22/2014 pneumococcal conjugate vaccine, 13 valent (CVX 133) administered 1/11/2015  rotavirus, live, monovalent vaccine (CVX 119) administered 1/22/2014 rotavirus, live, monovalent vaccine (CVX 119) administered 3/23/2014  Influenza, injectable, quadrivalent, preservative free, pediatric (CVX 161) administered 9/25/2014 Influenza, injectable, quadrivalent, preservative free, pediatric (CVX 161) administered 10/29/2014 Influenza, injectable, quadrivalent, preservative free, pediatric (CVX 161) administered 10/2/2015 Influenza, injectable, quadrivalent, preservative free, pediatric (CVX 161) administered 11/4/2016  hepatitis A vaccine, pediatric/adolescent dosage, 2 dose schedule (CVX 83) administered 11/23/2014 hepatitis A vaccine, pediatric/adolescent dosage, 2 dose schedule (CVX 83) administered 5/23/2015 measles, mumps, rubella virus vaccine (CVX 03) administered 11/22/2017  Varicella virus vaccine (CVX 21) administered 12/15/2015

<b>Post-Condition</b>
An updated vaccine forecast based upon the reconciled vaccine history is available to the user.
<b>Test Objectives</b>
<b>View Reconciled Immunization Forecast:</b> The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.
<b>Evaluation Criteria</b>
Tester verifies that the vendor can display the immunization forecast based upon the reconciled vaccination history:  1. Verify that the EMR does not include in reconciled vaccine forecast: IPV due on 4/30/2014 2. Verify that the EMR includes in reconciled vaccine forecast: IPV due on 10/31/2017 Varicella due on 10/31/2017 influenza, unspecified formulation due on 09/01/2018 or later (annual recommendation - specific date may vary somewhat)
<b>Notes</b>
The due date must be in range for the date shown. Vaccine forecast dates may be plus or minus 10 days to accommodate differences in date handling.  Further variation should be documented in the notable exceptions, but minimally each forecast vaccine must be present.

The inactivated influenza vaccinations is recorded in the EMR.

#### Test Objectives

**Record Vaccine Administration:** The EHR or other clinical software system records information about each vaccine administered. The EHR records this information as structured data elements, including, at a minimum: date administered, administering clinician, site of administration (e.g., left arm), immunization type, product, lot number, manufacturer, Vaccine Information Statement date, and quantity of vaccine/dose size.

#### Evaluation Criteria

The tester Verifies that there is a choice for VFC stock as she is VFC Eligible. The coded values are not expected to be displayed to the user, but it is expected that the value selected has the identified meaning, and it is expected that the system will use the coded value when the attribute is conveyed in later transactions:.

EMR Records the following vaccine administration information:

## 2.3. Juana Mariana Vazquez Transmit Immunization Report

Send the Immunization Report to the Immunization Registry (VXU/Z22) for Juana Mariana Vazquez.

### Test Story

#### Description

Following the vaccinations given during the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. The Vaccination report includes all newly administered vaccines. The report should include vaccines incorrectly recorded in the IIS. The report MAY send the immunizations that the EMR imported from the IIS.

#### Comments

The Report must include all newly administered vaccines in any order. The report should also include the corrected information where the EMR has different information than the IIS, and may also include the information imported from the IIS.

#### Pre-condition

The vaccines for the visit have been administered.

#### Post-Condition

The IIS has received the vaccine information (Z22 message).

#### Test Objectives

**Transmit Standard Patient Immunization History Report:** The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.

**Identify Adverse Event:** The EHR or other clinical software system enables capture of structured data regarding adverse events.

**Notify Public Health Immunization Registry (IIS) of Update from Adverse Event:** The EHR or other clinical software system notifies the public health immunization registry (IIS) of an update due to an adverse event.

**Link Standard Codes to Immunization Data:** The EHR or other clinical software system links standard codes to discrete data elements associated with an immunization.  
a. NDC codes, CVX for immunizations

#### Evaluation Criteria

Evaluation criteria is defined within each test step.

#### Notes

Sending information updated in the EMR back to the registry is an advanced function and some registries will not accept updates.

### 2.3.1. Transmit the immunization report to the Immunization Registry

Test Step Type: SUT\_INITIATOR

The EMR send the Immunization Report to the Immunization Registry (VXU/Z22) for updated vaccination information from the visit. This includes all newly administered vaccines and may include historical information updated in the EMR during the visit.

#### Test Story

##### Description

Following the vaccinations given during the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. The Vaccination report includes all newly administered vaccines. The report should include vaccines incorrectly recorded in the IIS. The report MAY send the immunizations that the EMR imported from the IIS.

##### Comments

The Report must include all newly administered vaccines in any order. the report should also include the corrected information where the EMR has different information than the IIS, and may also include the information imported from the IIS.

##### Pre-condition

The vaccines for the visit have been administered.

##### Post-Condition

The Immunization Report has been transmitted to the IIS using a valid Z22 VXU in accordance with the test data correctly and without omission.

##### Test Objectives

**Transmit Standard Patient Immunization History Report:** The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.

**Link Standard Codes to Immunization Data:** The EHR or other clinical software system links standard codes to discrete data elements associated with an immunization.  
a. NDC codes, CVX for immunizations

##### Evaluation Criteria

The VXU/Z22 message passes validation using the NIST Immunization VXU Validation Tool (Z22) (context-free). The content of the message correctly reflects the test data (context-based) in accordance with the Test Data Specification and the Message Content.

##### Notes

Sending information updated in the EMR back to the registry is an advanced function and some registries will not accept updates.

The ACK Z23 is received by the EHR.
<b>Test Objectives</b>
<i>Transmit Standard Patient Immunization History Report:</i> The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
<b>Evaluation Criteria</b>
The acknowledgement message is consumed by the system responsible for the content of the administration message without error. This is not typically part of the user interface, so this may be demonstrated through back-end evidence.
<b>Notes</b>
<b>Important note regarding the MSH-10 and MSA-2:</b> The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.

### Test Data Specification

**Patient Information**

<b>Element</b>	<b>Data</b>
This information will be automatically supplied by the System	

### 2.3.3. Record an adverse reaction

Test Step Type: SUT MANUAL

The Provider records in the EMR an adverse reaction of rash within 14 days of dose.

#### Test Story

<b>Description</b>
Following the vaccine administration, the mother reports that the patient had a rash within 14 days of dose.
<b>Comments</b>
No Comments
<b>Pre-condition</b>
The vaccinations for the visit have been administered.
<b>Post-Condition</b>
The adverse reaction to the Influenza vaccination of rash within 14 days of dose is recorded in the EMR.
<b>Test Objectives</b>
<b>Identify Adverse Event:</b> The EHR or other clinical software system enables capture of structured data regarding adverse events.
Support for:
<b>Notify Public Health Immunization Registry (IIS) of Update from Adverse Event:</b> The EHR or other clinical software system notifies the public health immunization registry (IIS) of an update due to an adverse event.
<b>Evaluation Criteria</b>
Verify that vendor can record the adverse reaction to the Influenza vaccination of rash within 14 days of dose correctly and without omission (VXC14). The coded value is not expected to be displayed to the user, but it is expected that the value selected has the identified meaning, and it is expected that the system will use the coded value when the attribute is conveyed in later transactions.
If the vendor is unable to record the concept (VXC14) using the CDCPHINVS coding system to convey this reaction to the registry, the vendor may specify the reaction using SNOMED-CT or Narrative Text. This should be recorded as passing, but with a notable exception documented.
<b>Notes</b>
Adverse Reactions may be documented with SNOMED-CT or as a narrative note. These two approaches may be considered passing with notable exception. The approach that is used instead of the value set PHVS_VaccinationReaction_IIS 2.16.840.1.114222.4.11.3289 should be documented in the tester notes.

## 2.3.4. Transmit the updated vaccination report with adverse reaction to the registry

Test Step Type: SUT\_INITIATOR

The EMR generates a Z22 Send Unsolicited Immunization Update Using a VXU correctly and without omission according to supplied test data.

### Test Story

<b>Description</b>
The adverse reaction to the Influenza vaccination of rash within 14 days of dose is reported to the Immunization Registry using a Z22/VXU message.
<b>Comments</b>
No Comments
<b>Pre-condition</b>
An adverse reaction to the Influenza vaccination of rash within 14 days of dose is recorded in the EMR.
<b>Post-Condition</b>
The adverse reaction has been transmitted to the IIS.
<b>Test Objectives</b>
<i>Transmit Standard Patient Immunization History Report:</i> The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
<i>Identify Adverse Event:</i> The EHR or other clinical software system enables capture of structured data regarding adverse events.
<i>Notify Public Health Immunization Registry (IIS) of Update from Adverse Event:</i> The EHR or other clinical software system notifies the public health immunization registry (IIS) of an update due to an adverse event.
<i>Link Standard Codes to Immunization Data:</i> The EHR or other clinical software system links standard codes to discrete data elements associated with an immunization. a. NDC codes, CVX for immunizations
<b>Evaluation Criteria</b>
The VXU/Z22 message passes validation using the NIST Immunization VXU Validation Tool (Z22) (context-free). The content of the message correctly reflects the test data (context-based) in accordance with the Test Data Specification and the Message Content.
<b>Notes</b>
The tester verifies that the message includes 'U' in RXA 21 for the Influenza vaccine.

## 2.3.5. Receive ACK Z23 from Immunization Registry for Updated Transmission

Test Step Type: TA\_RESPONDER

The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

### Test Story

<b>Description</b>
The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.
<b>Comments</b>
No Comments
<b>Pre-condition</b>
A VXU message is generated by the EHR.
<b>Post-Condition</b>
The ACK Z23 is received by the EHR.
<b>Test Objectives</b>
<b>Transmit Standard Patient Immunization History Report:</b> The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
<b>Evaluation Criteria</b>
The acknowledgement message is consumed by the system responsible for the content of the administration message without error. This is not typically part of the user interface, so this may be demonstrated through back-end evidence.
<b>Notes</b>
<b>Important note regarding the MSH-10 and MSA-2:</b> The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.

#### Notes

The immunization report may provide a subset of demographic information sufficient to identify the patient. Any demographic information included should be evaluated against the listed demographic information for accuracy.

The immunization report does not need to display all of the information listed in the evaluation criteria for each vaccination, but they do need to produce the

complete list of vaccines given and the date.

The tester is requested to document separately the success or failure of the Immunization History and the Immunization forecast as these two requirements are tested concurrently.

Influenza vaccine should be due between September and October of the flue season, which may show as the prior year to testing or the year of testing.

#### Notes

If the same immunization report verified in TestCase 4 for Juana Mariana Vazquez is used for the patient access to the immunization record, then content verification does not need to be repeated.

Influenza vaccine should be due between September and October of the flu season, which may show as the prior year to testing or the year of testing.

### **3. Juan Marcel Marina Visit**

Juan Marcel Marina visits the provider where his immunization history is retrieved from the registry and reconciled with the local information in the medical record to determine vaccines that are due. Vaccinations are ordered and administered. The vaccines are reported to the immunization registry and a vaccine summary is available for the patient.

### 3.1. Query the Registry for Juan Marcel Marina

EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juan Marcel Marina.

#### Test Story

##### Description

The EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juan Marcel Marina. Querying the registry will consist of the vendor creating Z44 messages for Juan Marcel Marina to be sent to the registry. The response will be processed as part of the 'Display, Reconcile, Import and Update Immunization Information' activity.

Using the Z42 Response to Immunization Registry Query, the EMR displays the Evaluated History and Forecast to the user for reconciliation and update. The vendor will receive information back from the registry and show the ability to view and reconcile, and import the information returned by the registry (NOTE: the Z42 message will be provided either manually, or as part of the tool). This test will also look at the system's ability to view the forecast returned by the registry, and create a new forecast after reconciling the information.

##### Comments

No Comments

##### Pre-condition

Juan Marcel Marina is entered as a patient in the EMR with complete Demographic data, Immunization History Data, and Clinical Data according to the steps in the 'Juan Marcel Marina Initial Data Load'

##### Post-Condition

A Z44 Query is generated and submitted to the Immunization Registry/Test tool, and a Z42 response is returned .

##### Test Objectives

**Select New Patient:** The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.

**Real Time Request/Receive Patient Immunization History:** The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (QBP/RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

**Request/Receive Patient Immunization Data and Identify Source:** The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

**View Reconciled Immunization Forecast:** The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.

**Review Patient Immunization History:** To assist with the ordering process, the EHR or other clinical software system allows a user to specify standard views of patient immunization information for each vaccine dose administration, including patient-specific data (e.g., age on dates of administration, etc.).

##### Support for:

**Receive Dose Not Indicated Alert for Single Vaccine Order:** The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.

##### Evaluation Criteria

Evaluation criteria is defined within each test step.

### 3.1.3. View and import response to request for vaccination history for Juan Marcel Marina

Test Step Type: TA\_RESPONDER

The EMR displays the Immunization History results (Z42) returned in response to the Z44 Query and import them into the EMR

#### Test Story

##### Description

The physician accesses the record for Juan Marcel Marina and:

- Accepts the vaccines provided by the registry as this is a new patient and there are no prior vaccines recorded

##### Comments

There is no reconciliation step as there are no historical immunizations in the EMR. All will be imported from the Z42 response.

##### Pre-condition

A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR and the response is available in the EMR for reconciliation and import.

##### Post-Condition

Evaluated Immunization History returned from the registry is reconciled and imported into the patient record (Juan Marcel Marina)

##### Test Objectives

**Real Time Request/Receive Patient Immunization History:** The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

**Request/Receive Patient Immunization Data and Identify Source:** The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

**Compare Public Health Immunization Registry (IIS) Immunization History to EHR Immunization History:** The public health immunization registry has returned the requested immunization history for a patient. The EHR is able to display the immunization history received from the registry as well as the immunization history already present in the EHR so that a user can compare them. The EHR provides a way for the provider to view both histories, determine what is different (if anything), and update the existing EHR immunization history with new information from the public health registry if he or she chooses to do so. The system must store the new information as structured data as part of the patient's local immunization history and include the time of the update and the source of the new information.

**Review Patient Immunization History:** To assist with the ordering process, the EHR or other clinical software system allows a user to specify standard views of patient immunization information for each vaccine dose administration, including patient-specific data (e.g., age on dates of administration, etc.).

Supporting data for:

**Receive Dose Not Indicated Alert for Single Vaccine Order:** The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.

##### Evaluation Criteria

1. The EMR displays the information returned from the Immunization Registry according to the Juror Document2. The user imports returned vaccinations as follows using only the vaccination, and administration dates returned from the Immunization Registry:

## DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

When displayed in the EHR with the Evaluated Immunization History and Immunization Forecast, these patient demographics data may be derived from either the received immunization message or the EHR patient record. When displaying demographics from the patient record, the EHR must be able to demonstrate a linkage between the demographics in the message (primarily the patient ID in PID-3.1) and the patient record used for display to ensure that the message was associated with the appropriate patient.

### 3.1.4. View the vaccination forecast for Juan Marcel Marina

Test Step Type: SUT MANUAL

The EMR displays the current Immunization Forecast to the user for Juan Marcel Marina either as returned by the IIS in prior step, or as generated thru any local means.

#### Test Story

##### Description

The physician accesses the record for Juan Marcel Marina and, once the vaccine history is reconciled in the EMR, the vaccine forecast is updated.

- The provider views the updated vaccine forecast (either as provided by the Immunization Registry or as determined through EMR defined methods)

##### Comments

The vaccine forecast may be imported from the Immunization Registry Vaccination History and Forecast (Z42) response, or it may be generated by EMR defined means.

##### Pre-condition

EMR Vaccine History is imported from the Immunization History returned from the Immunization Registry (previous step 'View and import response to request for vaccination history for Juan Marcel Gonzales')

##### Post-Condition

A vaccine forecast based upon the imported vaccine history is available to the user.

##### Test Objectives

**View Reconciled Immunization Forecast:** The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.

**Modify Antigen Recommendations Based on Active Diagnoses:** The system notifies the provider of any conflicts between recommended vaccines in the updated forecast and the patient's current or historical diagnoses.

##### Evaluation Criteria

1. Tester verifies that the vendor can display the immunization forecast based upon the reconciled vaccination history:
2. Verify that the EMR includes in the vaccine forecast:

Hep B Peds NOS due on 8/31/2017

influenza, unspecified formulation due on Sep 1, 2018 or later (annual recommendation - specific date may vary somewhat)

In support of test objective 'Modify Antigen Recommendations Based on Active Diagnoses' the tester verifies that the system notifies the provider that:

1. Varicella due on 3/4/2018 - Forecast should not show that they need vaccine for Varicella; because of known diagnosis that this is due.

2. Hep A is due 3/4/2018 - Forecast may not show that they need the vaccine for Hepatitis A due to serologic immunity to the disease.

##### Notes

The due date must be in range for the date shown. Vaccine forecast dates may be plus or minus 10 days to accommodate differences in date handling.

Further variation should be documented in the notable exceptions, but minimally each forecast vaccine must be present.

- Tester should document how evidence of prior disease (Varicella) is documented (e.g. if not in forecast, is there a reason available to clinician).
- Manual override does not fulfill the 'modify antigen recommendations based on active diagnosis'(e.g. if the system does not support this through CDS then not fulfilled)
- This criteria is considered 'Advanced', so tester should note support for this criteria separately.

### 3.2. Juan Marcel Marina, Enter Orders and Immunizations

Orders and Immunization events, non-administrations, and alerts presented for current visit.

#### Test Story

<b>Description</b>
This test will consist of ordering vaccines for the test patients, reviewing any alerts caused by specific scenarios, and documenting vaccinations administered to the patients.
<b>Comments</b>
No Comments
<b>Pre-condition</b>
Juan Marcel Marina is entered as a patient in the EMR with complete Demographic data, Immunization History Data, and Clinical Data according to the steps in the 'Juan Marcel Marina Initial Data Load'
<b>Post-Condition</b>
Visit orders are entered in Juan Marcel Marina's record.
<b>Test Objectives</b>
<b>Modify Antigen Recommendations Based on Active Diagnoses:</b> The system notifies the provider of any conflicts between recommended vaccines in the updated forecast and the patient's current or historical diagnoses.
<b>Enter Vaccination Order:</b> The EHR or other clinical software system allows providers to order immunizations for a patient using filters for type of vaccine, including combination vaccines.
<b>Receive Dose Not Indicated Alert for Single Vaccine Order:</b> The EHR or other clinical software system notifies the provider in instances when there are single or combination vaccine orders that are inconsistent with the expected timing intervals included in the vaccine forecast. Inconsistencies include suggestion of different date(s) for ordering the vaccine(s) or indication the vaccine(s) is/are no longer required.
<b>Notify of Vaccine Dose Expiration:</b> The EHR or other clinical software system notifies the provider administering a vaccine if the dose chosen for administration is expired.
<b>Record Vaccine Administration:</b> The EHR or other clinical software system records information about each vaccine administered. The EHR records this information as structured data elements, including, at a minimum: date administered, administering clinician, site of administration (e.g., left arm), immunization type, product, lot number, manufacturer, Vaccine Information Statement date, and quantity of vaccine/dose size.
<b>Notify of Vaccine Dose Ineligibility:</b> The EHR or other clinical software system provides a method for alerting a provider if a vaccine is selected for a patient who is not eligible for the inventory item selected.
<b>Evaluation Criteria</b>
Evaluation criteria is defined within each test step .

##### Notes

The EMR does not need to specify a 'new immunization', as long as there is a way to indicate that it is a new immunization within the EMR, this is acceptable (e.g. the default interpretation of the data entry is that it is a new immunization and not historical).

### 3.3. Juan Marcel Marina Transmit Immunization Report

Send the Immunization Report to the Immunization Registry (VXU/Z22) for Juan Marcel Marina.

#### Test Story

### 3.3.2. Receive ACK Z23 from Immunization Registry

Test Step Type: TA\_RESPONDER

The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

#### Test Story

<b>Description</b>
The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.
<b>Comments</b>
No Comments
<b>Pre-condition</b>
A VXU message is generated by the EHR.
<b>Post-Condition</b>
The ACK Z23 is received by the EHR.
<b>Test Objectives</b>
<b>Transmit Standard Patient Immunization History Report:</b> The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
<b>Evaluation Criteria</b>
The acknowledgement message is consumed by the system responsible for the content of the administration message without error.
<b>Notes</b>
<b>Important note regarding the MSH-10 and MSA-2:</b> The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.

### 3.3.4. Receive ACK Z23 from Immunization Registry

Test Step Type: TA\_RESPONDER

The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

#### Test Story

<b>Description</b>
The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.
<b>Comments</b>
No Comments
<b>Pre-condition</b>
A VXU message is generated by the EHR.
<b>Post-Condition</b>
The ACK Z23 is received by the EHR.
<b>Test Objectives</b>
<b>Transmit Standard Patient Immunization History Report:</b> The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
<b>Evaluation Criteria</b>
The acknowledgement message is consumed by the system responsible for the content of the administration message without error.
<b>Notes</b>
<b>Important note regarding the MSH-10 and MSA-2:</b> The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.

## 4. Juana Mariela Gonzales Visit

Infant twin, Juana Mariela Gonzales visits the provider where her immunization history is retrieved from the registry and reconciled with the local information in the medical record to determine vaccines that are due. Vaccinations are deferred due to fever. The vaccine deferrals are reported to the immunization registry and a vaccine summary is available for the patient.

## 4.1. Query the Registry for Juana Mariela Gonzales

EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juana Mariela Gonzales.

### Test Story

#### Description

The EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juana Mariela Gonzales. Querying the registry will consist of the vendor creating Z44 messages for Juana Mariela Gonzales to be sent to the registry. The response will be processed as part of the 'Display, Reconcile, Import and Update Immunization Information' activity.

Using the Z42 Response to Immunization Registry Query, the EMR displays the Evaluated History and Forecast to the user for reconciliation and update. The vendor will receive information back from the registry and show the ability to view and reconcile, and import the information returned by the registry (NOTE: the Z42 message will be provided either manually, or as part of the tool). This test will also look at the system's ability to view the forecast returned by the registry, and create a new forecast after reconciling the information.

#### Comments

No Comments

#### Pre-condition

Juana Mariela Gonzales is entered as a patient in the EMR with complete Demographic data, Immunization History Data, and Clinical Data according to the steps in the Juana Mariela Gonzales Initial Data Load'

#### Post-Condition

A Z44 Query is generated and submitted to the Immunization Registry/Test tool, and a Z42 response is returned.

#### Test Objectives

**Select New Patient:** The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.

**Real Time Request/Receive Patient Immunization History:** The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (QBP/RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

**Request/Receive Patient Immunization Data and Identify Source:** The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

**View Reconciled Immunization Forecast:** The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.

#### Evaluation Criteria

Evaluation criteria is defined within each test step.

#### 4.1.3. View and import response to request for vaccination history for Juana Mariela Gonzales

Test Step Type: TA\_RESPONDER

The EMR displays the Immunization History results (Z42) returned in response to the Z44 Query and import them into the EMR.

##### Test Story

###### Description

The physician accesses the record for Juana Mariela Gonzales and:

- Accepts the single vaccine in the registry record into the EHR history

###### Comments

There is no reconciliation step as there are no historical immunizations in the EMR. All will be imported from the Z42 response.

###### Pre-condition

A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR and the response is available in the EMR for reconciliation and import.

###### Post-Condition

Evaluated Immunization History returned from the registry is reconciled and imported into the patient record (Juana Mariela Gonzales)

###### Test Objectives

**Request/Receive Patient Immunization Data and Identify Source:** The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

**Real Time Request/Receive Patient Immunization History:** The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

###### Evaluation Criteria

1. The EMR displays the information returned from the Immunization Registry according to the Juror Document.

2. The user imports returned vaccinations as follows:

###### a. Vaccinations Imported:

hepatitis B vaccine, pediatric or pediatric/adolescent dosage (CVX 08) administered 10/1/2018

###### Notes

If the EMR is unable to match and import the previous immunization record, they will need to add the following historical immunization manually:

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

#### 4.1.4. View the vaccination forecast for Juana Mariela Gonzales

Test Step Type: SUT MANUAL

The EMR displays the current Immunization Forecast to the user for Juana Mariela Gonzales either as returned by the IIS in prior step, or as generated thru any local means.

##### Test Story

###### Description

The physician accesses the record for Juana Mariela Gonzales and:

- Views the vaccine forecast (either as provided by the Immunization Registry or as determined through EMR defined methods)

###### Comments

No Comments

###### Pre-condition

EMR Vaccine History is imported from the Immunization History returned from the Immunization Registry (previous step 'View and import response to request for vaccination history for Juana Mariela Gonzales')

###### Post-Condition

A vaccine forecast based upon the imported vaccine history is available to the user.

###### Test Objectives

**View Reconciled Immunization Forecast:** The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.

###### Evaluation Criteria

1. Tester verifies that the vendor can display the immunization forecast based upon the reconciled vaccination history:
2. Verify that the EMR includes in the vaccine forecast:

Hep B Peds NOS due on 10/31/2018

DTaP due on 11/30/2018

Hib due on 11/30/2018

IPV due on 11/30/2018

Pneumococcal conjugate due on 11/30/2018

Rotavirus due on 11/30/2018

HepA due on 10/1/2019

MMR due on 10/1/2019

Varicella due on 10/1/2019

Influenza, unspecified formulation due on Sept 1, 2019 or later

###### Notes

The due date must be in range for the date shown. Vaccine forecast dates may be plus or minus 10 days to accommodate differences in date handling.

Further variation should be documented in the notable exceptions, but minimally each forecast vaccine must be present.

## 4.3.2. Receive ACK Z23 from Immunization Registry

Test Step Type: TA\_RESPONDER

The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.

### Test Story

<b>Description</b>
The Immunization Registry returns a positive acknowledgement message indicating that no errors were found during the course of filing the message.
<b>Comments</b>
No Comments
<b>Pre-condition</b>
A VXU message is generated by the EHR.
<b>Post-Condition</b>
The ACK Z23 is received by the EHR.
<b>Test Objectives</b>
No Test Objectives
<b>Evaluation Criteria</b>
The acknowledgement message is consumed by the system responsible for the content of the administration message without error.
<b>Notes</b>
<b>Important note regarding the MSH-10 and MSA-2:</b> The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.

## 5.1. Query the Registry for Juana Maria Gonzales.

EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juana Maria Gonzales

### Test Story

<b>Description</b>
The EMR Generates a Z44 query to the Immunization Registry to retrieve the Evaluated History and Forecast for Juana Maria Gonzales. Querying the registry will consist of the vendor creating Z44 messages for Juana Maria Gonzales to be sent to the registry. The response will be processed as part of the 'Display, Reconcile, Import and Update Immunization Information' activity.
Using the Z42 Response to Immunization Registry Query, the EMR displays the Evaluated History and Forecast to the user for reconciliation and update. The vendor will receive information back from the registry and show the ability to view and reconcile, and import the information returned by the registry (NOTE: the Z42 message will be provided either manually, or as part of the tool). This test will also look at the system's ability to view the forecast returned by the registry, and create a new forecast after reconciling the information.
<b>Comments</b>
No Comments
<b>Pre-condition</b>
Juana Mariela Gonzales is entered as a patient in the EMR with complete Demographic data, Immunization History Data, and Clinical Data according to the steps in the Juana Mariela Gonzales Initial Data Load
<b>Post-Condition</b>
A Z44 Query is generated and submitted to the Immunization Registry/Test tool, and a Z42 response is returned.
<b>Test Objectives</b>
<b>Select New Patient:</b> The system must allow a user to enter distinguishing information about patients so that providers can uniquely identify patients who have similar sounding names or other similar identifying information. For example, twins living in the same household will have similar dates of birth, addresses, and may have similar names. EHRs or other clinical software must be able to store information to successfully match with patients in immunization registries, if the information is available. The information includes the mother's maiden name, whether the patient was part of a multiple birth, and the order of the multiple birth. This information allows the provider to correctly identify the patient and also helps assure a match when the EHR send the patient's information to external systems such as an immunization registry.
<b>Real Time Request/Receive Patient Immunization History:</b> The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (QBP/RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).
<b>Request/Receive Patient Immunization Data and Identify Source:</b> The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.
<b>View Reconciled Immunization Forecast:</b> The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.
<b>Evaluation Criteria</b>
Evaluation criteria is defined within each test step.

## 5.1.2. Query Registry for vaccination history and forecast too many matches found response

Test Step Type: SUT\_INITIATOR

Vendor SHALL be able to Generate a Z44 Query correctly and without omission according to supplied test data

### Test Story

#### Description

The provider uses the EMR to query the Immunization Registry for an Evaluated History and Forecast based on information known to the Immunization Registry. This query will result in an error that too many matches are found.

#### Comments

While the query is identical, the response to this step will be that no persons are found. No demographic changes are requested for this step as the error trigger is specific to the test step.

#### Pre-condition

Juana Maria Gonzales Initial Data Load is completed.

Juana Maria Gonzales is the active working patient in the EMR.

#### Post-Condition

The Immunization Registry responds with Evaluated Vaccine History and Forecast for Juana Maria Gonzales.

#### Test Objectives

**Real Time Request/Receive Patient Immunization History:** The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (QBP/RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

Setup step to test error handling: Test the capability of the EHR-S to process a response message that returns no persons found and to provide an indication to the end user.

#### Evaluation Criteria

Tester shall verify that the vendor can produce a valid Z44 query in accordance with the test data correctly and without omission.

Tester shall verify that the data in the message corresponds to the data in the EMR and contains all test data attributes supplied.

### 5.1.3. Error Handling - Too many matches found

Test Step Type: TA\_RESPONDER

The EMR receives a response from the registry query that too many persons are found. The EMR notifies the user/clinician.

#### Test Story

<b>Description</b>
The EMR processes notifies the user that there were too many matches found in response to the query the Immunization Registry for an Evaluated History and Forecast.
<b>Comments</b>
The sending (querying) system will need to accept a response indicating that too many matches were found.
<b>Pre-condition</b>
A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR and the response is available in the EMR for reconciliation and import.
<b>Post-Condition</b>
The Immunization Registry responds with a message indicating too many matches are found. The EMR has notified the user.
<b>Test Objectives</b>
<b>Real Time Request/Receive Patient Immunization History:</b> The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).
Tests error handling: Test the capability of the EHR-S to process a response message that returns too many matches found and to provide an indication to the end user.
<b>Evaluation Criteria</b>
The tester verifies that the user/clinician is notified of no match.
The EHR shall display a notification indicating that the query for an Evaluated Immunization History and Immunization Forecast is complete but too many matching records were found for the person in the query.

While the query is identical, the response to this step will be that no persons are found. No demographic changes are requested for this step as the error trigger is specific to the test step.
<b>Pre-condition</b> Juana Maria Gonzales Initial Data Load is completed.  Juana Maria Gonzales is the active working patient in the EMR.
<b>Post-Condition</b> The Immunization Registry responds with Evaluated Vaccine History and Forecast for Juana Maria Gonzales.

When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.
<b>Evaluation Criteria</b> Tester verifies that the message has been created and submitted in the test plan to trigger the error handling response in the next step.

## 5.1.7. View and import response to request for vaccination history for Juana Maria Gonzales

Test Step Type: TA\_RESPONDER

The EMR displays the Immunization History results (Z42) returned in response to the Z44 Query and import them into the EMR.

### Test Story

#### Description

The physician accesses the record for Juana Maria Gonzales and:

- Accepts the single vaccine in the registry record into the EHR history

#### Comments

There is no reconciliation step as there are no historical immunizations in the EMR. All will be imported from the Z42 response.

#### Pre-condition

A Z44 query has been submitted to the Immunization Registry and a Z42 response is provided back to the EMR and the response is available in the EMR for reconciliation and import.

#### Post-Condition

Evaluated Immunization History returned from the registry is reconciled and imported into the patient record (Juana Maria Gonzales)

#### Test Objectives

**Request/Receive Patient Immunization Data and Identify Source:** The EHR or other clinical software is able to store immunization history accepted electronically from other sources (such as a public health immunization registry consistent with HL7 version 2.5.1, Implementation Guide for Immunization Messaging Release 1.5) or communicated by the patient and manually entered by the clinician. When viewing such information, the provider can determine which immunizations were administered by the practice, which were entered manually as patient-reported, and which were accepted electronically from the public health registry.

**Real Time Request/Receive Patient Immunization History:** The system sends a request to the public health immunization registry "on demand" (e.g., those without scheduled appointments). The request includes the identifying information the immunization registry needs to match each patient with those in the registry including, if present, the mother's maiden name, a multiple birth indicator, and the birth order. The request also is sent in a pre-determined format the registry can read and interpret (Query Response Grammar (RSP) - HL7 version 2.5.1 Implementation Guide for Immunization Messaging Release 1.5).

#### Evaluation Criteria

1. The EMR displays the information returned from the Immunization Registry according to the Juror Document.

2. The user imports the vaccination given and the date administered returned from the immunization registry as follows:

#### a. Vaccinations Imported:

hepatitis B vaccine, pediatric or pediatric/adolescent dosage (CVX 08) administered 10/1/2018

#### Notes

The message returns 'BG2' in the first name of the patient as the first immunization was given at the time of birth before the patient's first name was selected. The EMR should be able to import this record into the patient record despite the apparent name mismatch retaining the original name, Juana Maria Gonzales.

If the EMR is unable to match and import the previous immunization record, they will need to add the following historical immunization manually. The coded values are not expected to be displayed to the user, but it is expected that the value selected has the identified meaning, and it is expected that the system will use the coded value when the attribute is conveyed in later transactions:

### DISPLAY VERIFICATION

This Test Case-specific Juror Document provides a checklist for the Tester to use during certification testing for assessing the EHR technology's ability to display required core data elements from the information received in the Evaluated Immunization History and Immunization Forecast Z42 response message. Additional data from the message or from the EHR are permitted to be displayed by the EHR. Grayed-out fields in the Juror Document indicate where no data for the data element indicated were included in the Z42 message for the given Test Case.

The format of this Juror Document is for ease-of-use by the Tester and does not indicate how the EHR display must be designed.

The Evaluated Immunization History and Immunization Forecast data shown in this Juror Document are derived from the Z42 message provided with the given Test Case; equivalent data are permitted to be displayed by the EHR. The column headings are meant to convey the kind of data to be displayed; equivalent labels/column headings are permitted to be displayed by the EHR.

## 5.1.8. View the vaccination forecast for Juana Maria Gonzales

Test Step Type: SUT MANUAL

The EMR displays the current Immunization Forecast to the user for Juana Maria Gonzales either as returned by the IIS in prior step, or as generated thru any local means.

### Test Story

#### Description

The physician accesses the record for Juana Maria Gonzales and:

- Views the vaccine forecast (either as provided by the Immunization Registry or as determined through EMR defined methods)

#### Comments

No Comments

#### Pre-condition

EMR Vaccine History is imported from the Immunization History returned from the Immunization Registry (previous step 'View and import response to request for vaccination history for Juana Maria Gonzales')

#### Post-Condition

A vaccine forecast based upon the imported vaccine history is available to the user.

#### Test Objectives

**View Reconciled Immunization Forecast:** The EHR or other clinical software system has the ability to re-evaluate and update the immunization forecast using a patient's newly updated immunization history, where the updated forecast results from the reconciliation of immunization data contained in the public health immunization registry with immunization data contained in the EHR. Processing the new forecast can be internal to the EHR or it can use an external forecasting service.

#### Evaluation Criteria

1. Tester verifies that the vendor can display the immunization forecast based upon the reconciled vaccination history:
2. Verify that the EMR includes in the vaccine forecast:

Hep B Peds NOS due on 10/31/2018

DTaP due on 11/30/2018

Hib due on 11/30/2018

IPV due on 11/30/2018

Pneumococcal conjugate due on 11/30/2018

Rotavirus due on 11/30/2018

HepA due on 10/1/2019

MMR due on 10/1/2019

Varicella due on 10/1/2019

Influenza, unspecified formulation due on Sept 1, 2019 or later

#### Notes

The due date must be in range for the date shown. Vaccine forecast dates may be plus or minus 10 days to accommodate differences in date handling.

Further variation should be documented in the notable exceptions, but minimally each forecast vaccine must be present.

## 5.2. Juana Maria Gonzales, Enter Orders and Immunizations

Orders and Immunization events, non-administrations, and alerts presented for current visit.

### Test Story

<b>Description</b>
This test will consist of ordering vaccines for the test patients, reviewing any alerts caused by specific scenarios, and documenting vaccinations administered to the patients.
<b>Comments</b>

<b>Pre-condition</b>
Juana Maria Gonzales is entered as a patient in the EMR with complete Demographic data, Immunization History Data, and Clinical Data according to the steps in the 'Juana Maria Gonzales Initial Data Load'
<b>Post-Condition</b>
Visit orders are entered in Juana Maria Gonzales' record.
<b>Test Objectives</b>
Supporting data for error handling tests.
<b>Record Vaccine Administration:</b> The EHR or other clinical software system records information about each vaccine administered. The EHR records this information as structured data elements, including, at a minimum: date administered, administering clinician, site of administration (e.g., left arm), immunization type, product, lot number, manufacturer, Vaccine Information Statement date, and quantity of vaccine/dose size.
<b>Evaluation Criteria</b>
Evaluation criteria is defined within each test step.

## 5.2.1. Record Combo Vaccine administration

Test Step Type: SUT MANUAL

The EMR is able to document all attributes associated with the new vaccine administration.

### Test Story

#### Description

The nurse administers the the DTaP-hepatitis B and poliovirus vaccine  
- Documents all required information for the vaccine

#### Comments

No Comments

#### Pre-condition

Order is placed for DTaP-hepatitis B and poliovirus vaccine.

#### Post-Condition

The DTaP-hepatitis B and poliovirus vaccination is recorded in the EMR.

#### Test Objectives

**Record Vaccine Administration:** The EHR or other clinical software system records information about each vaccine administered. The EHR records this information as structured data elements, including, at a minimum: date administered, administering clinician, site of administration (e.g., left arm), immunization type, product, lot number, manufacturer, Vaccine Information Statement date, and quantity of vaccine/dose size.

#### Evaluation Criteria

EMR Records the following vaccine administration information. The coded values are not expected to be displayed to the user, but it is expected that the value selected has the identified meaning, and it is expected that the system will use the coded value when the attribute is conveyed in later transactions:

### 5.3. Juana Maria Gonzales Morales Transmit Immunization Report - Error Handling

This Test Case verifies the ability of the EMR to handle errors and warnings in response to the Send the Immunization Report to the Immunization Registry (VXU/Z22) transaction for Juana Maria Gonzales.

#### Test Story

##### Description

Following the vaccinations given during the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. The Vaccination report includes all newly administered vaccines. The report MAY send the immunizations that the EMR imported from the IIS.

This transaction will result in an error or warning from the IIS.

##### Comments

No Comments

##### Pre-condition

The vaccines for the visit have been administered.

##### Post-Condition

The IIS has received the vaccine information (Z22 message) and issued a Z23 response with an error or warning.

##### Test Objectives

**Transmit Standard Patient Immunization History Report:** The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.

Verify that the EMR is able to receive and display the error or warning response from the IIS.

**Link Standard Codes to Immunization Data:** The EHR or other clinical software system links standard codes to discrete data elements associated with an immunization.  
a. NDC codes, CVX for immunizations

##### Evaluation Criteria

Evaluation criteria is defined within each test step.

##### Notes

### 5.3.1. Transmit the Immunization Report for Juana Maria Gonzales Morales - Fatal Error Handling

Test Step Type: SUT\_INITIATOR

The EMR sends the Immunization Report to the Immunization Registry (VXU/Z22) for updated vaccination information from the visit. This will result in a fatal error from the IIS to assess the EMR ability to receive and display the error.

#### Test Story

<b>Description</b>
Following the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. The report MAY send the immunizations that the EMR imported from the IIS. This will result in a warning from the IIS to assess the EMR ability to receive and display the error.
<b>Comments</b>
The Report must include all vaccine deferrals recorded in the EMR in any order. The report may include the information imported from the IIS
<b>Pre-condition</b>
The vaccines for the visit have been administered.
<b>Post-Condition</b>
The Immunization Report has been transmitted to the IIS using a valid Z22 VXU in accordance with the test data correctly and without omission.
<b>Test Objectives</b>
<b>Transmit Standard Patient Immunization History Report:</b> The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.  Setup to verify that the EMR is able to receive and display the error response from the IIS.  <b>Link Standard Codes to Immunization Data:</b> The EHR or other clinical software system links standard codes to discrete data elements associated with an immunization. a. NDC codes, CVX for immunizations
<b>Evaluation Criteria</b>
The VXU/Z22 message passes validation using the NIST Immunization VXU Validation Tool (Z22) (context-free). The content of the message correctly reflects the test data (context-based) in accordance with the Test Data Specification and the Message Content.
<b>Notes</b>
The protection indicator for Juana Maria is 'Yes'. If this setting restricts the EMR from transmitting to the IIS, then the protection indicator for Juana Maria may be modified to 'No' for the purpose of this transaction.

### 5.3.2. Receive ACK Z23 Fatal Error - CVX Code

Test Step Type: TA\_RESPONDER

The Immunization Registry returns a fatal error message indicating a table mapping error for the CVX code submitted was found during the course of filing the message.

#### Test Story

<b>Description</b>
The Immunization Registry returns a fatal error message indicating a table mapping error for the CVX code submitted was found during the course of filing the message.
<b>Comments</b>
No Comments
<b>Pre-condition</b>
A VXU message is generated by the EHR.
<b>Post-Condition</b>
The ACK Z23 is received by the EHR.
<b>Test Objectives</b>
<b>Transmit Standard Patient Immunization History Report:</b> The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
Error Handling Support for a fatal error returned by the IIS, and the ability of the EMR to display a notification of this error to the user.
<b>Evaluation Criteria</b>
The acknowledgement error message is consumed by the system responsible for the content of the administration message. The error returned is visible in the EMR .
<b>Notes</b>
<b>Important note regarding the MSH-10 and MSA-2:</b> The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.

### 5.3.3. Transmit the Immunization Report for Juana Maria Gonzales - warning handling

Test Step Type: SUT\_INITIATOR

The EMR sends the Immunization Report to the Immunization Registry (VXU/Z22) for updated vaccination information from the visit. This will result in a warning from the IIS to assess the EMR ability to receive and display the warning.

#### Test Story

<b>Description</b>
Following the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. This will result in multiple warnings from the IIS to assess the EMR ability to receive and display the error.
<b>Comments</b>
The Report must include the newly administered vaccine recorded in the EMR. The report may include the information imported from the IIS
<b>Pre-condition</b>
The vaccines for the visit have been administered.
<b>Post-Condition</b>
The Immunization Report has been transmitted to the IIS using a valid Z22 VXU in accordance with the test data correctly and without omission.
<b>Test Objectives</b>
<b>Transmit Standard Patient Immunization History Report:</b> The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.  Set up to verify that the EMR is able to receive and display the multiple warning response from the IIS.
<b>Link Standard Codes to Immunization Data:</b> The EHR or other clinical software system links standard codes to discrete data elements associated with an immunization. a. NDC codes, CVX for immunizations
<b>Evaluation Criteria</b>
The VXU/Z22 message passes validation using the NIST Immunization VXU Validation Tool (Z22) (context-free). The content of the message correctly reflects the test data (context-based) in accordance with the Test Data Specification and the Message Content.
<b>Notes</b>
The protection indicator for Juana Maria is 'Yes'. If this setting restricts the EMR from transmitting to the IIS, then the protection indicator for Juana Maria may be modified to 'No' for the purpose of this transaction.

### 5.3.4. Receive ACK Z23 Warning - Invalid Value

Test Step Type: TA\_RESPONDER

The Immunization Registry returns a warning message indicating an invalid administration site code submitted was found during the course of filing the message.

#### Test Story

<b>Description</b>
The Immunization Registry returns a warning message indicating an unrecognized administration site code submitted was found during the course of filing the message.
<b>Comments</b>
No Comments
<b>Pre-condition</b>
A VXU message is generated by the EHR.
<b>Post-Condition</b>
The ACK Z23 is received by the EHR.
<b>Test Objectives</b>
<b>Transmit Standard Patient Immunization History Report:</b> The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
Error Handling Support for a warning returned by the IIS, and the ability of the EMR to display a notification of this warning to the user.
<b>Evaluation Criteria</b>
The acknowledgement warning message is consumed by the system responsible for the content of the administration message. The warning returned is visible in the EMR .
<b>Notes</b>
<b>Important note regarding the MSH-10 and MSA-2:</b> The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.

## Test Data Specification

**Patient Information**

<b>Element</b>	<b>Data</b>
This information will be automatically supplied by the System	

### 5.3.5. Transmit the Immunization Report for Juana Maria Gonzales - Multiple warning handling

Test Step Type: SUT\_INITIATOR

The EMR sends the Immunization Report to the Immunization Registry (VXU/Z22) for updated vaccination information from the visit. This will result in multiple warnings from the IIS to assess the EMR ability to receive and display the warnings.

#### Test Story

<b>Description</b>
Following the visit, the EMR transmits an Immunization report to the Immunization Registry using the VXU/Z22. This will result in multiple warnings from the IIS to assess the EMR ability to receive and display the warnings.
<b>Comments</b>
The Report must include the newly administered vaccine recorded in the EMR. The report may include the information imported from the IIS
<b>Pre-condition</b>
The vaccines for the visit have been administered.
<b>Post-Condition</b>
The Immunization Report has been transmitted to the IIS using a valid Z22 VXU in accordance with the test data correctly and without omission.
<b>Test Objectives</b>
<b>Transmit Standard Patient Immunization History Report:</b> The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
Set up to verify that the EMR is able to receive and display the multiple warning response from the IIS.
<b>Link Standard Codes to Immunization Data:</b> The EHR or other clinical software system links standard codes to discrete data elements associated with an immunization.
a. NDC codes, CVX for immunizations
<b>Evaluation Criteria</b>
The VXU/Z22 message passes validation using the NIST Immunization VXU Validation Tool (Z22) (context-free). The content of the message correctly reflects the test data (context-based) in accordance with the Test Data Specification and the Message Content.
<b>Notes</b>
The protection indicator for Juana Maria is 'Yes'. If this setting restricts the EMR from transmitting to the IIS, then the protection indicator for Juana Maria may be modified to 'No' for the purpose of this transaction.

### 5.3.6. Receive ACK Z23 Multiple Warnings

Test Step Type: TA\_RESPONDER

The Immunization Registry returns a message with multiple warnings for invalid administration site codes submitted found during the course of filing the message.

#### Test Story

<b>Description</b>
The Immunization Registry returns a message with multiple warnings indicating unrecognized administration site codes submitted were found during the course of filing the message.
<b>Comments</b>
No Comments
<b>Pre-condition</b>
A VXU message is generated by the EHR.
<b>Post-Condition</b>
The ACK Z23 is received by the EHR.
<b>Test Objectives</b>
<b>Transmit Standard Patient Immunization History Report:</b> The EHR or other clinical software system directly or indirectly through an intermediary creates and transmits a report of a patient's immunization history to public health immunization registries.
Error Handling Support for multiple warnings returned by the IIS, and the ability of the EMR to display a notification of these warnings to the user.
<b>Evaluation Criteria</b>
The acknowledgement warning message is consumed by the system responsible for the content of the administration message. The multiple warnings returned is visible in the EMR .
<b>Notes</b>
<b>Important note regarding the MSH-10 and MSA-2:</b> The NIST acknowledgment message is predefined and is based on the VXU message. Most systems will automatically create the message control Identifier and may require it for importing, linking, and processing the ACK message. The NIST ACK test message can be modified such that MSA-2 matches MSH-10 of the VXU message generated by the system-under test.
