Description

No Comments

Pre-condition

Order is placed for inactivated influenza vaccine.

Post-Condition

The inactivated influenza vaccinations is recorded in the EHR.

Test Objectives

Record Vaccine Administration: The EHR or other clinical software system records information about each vaccine administered. The EHR records this information as structured data elements, including, at a minimum: date administered, administering clinician, site of administration (e.g., left arm), immunization type, lot number, manufacturer, Vaccine Information Statement date, quantity of vaccine/dose size and ordering clinician. The system also assures data quality, i.e., data entered are appropriate (e.g., avoid "oral" route for IM vaccines, and assures dose is appropriate for the vaccine).

Record Vaccine Information by Scanning 2D Barcode Found on Unit-of-Use for Vaccine Administration: The EHR or other clinical software system allows users to record vaccination information from 2D barcodes (GS1

The EHR or other clinical software system allows users to record vaccination information from 2D barcodes (GSI DataMatrix) found on unit-of-use (vial or pre-filled syringe) for each vaccine administered. This 2D barcode contains: the Global Trade Item Number (GTIN), expiration date and lot number. The National Drug Code and manufacturer data elements (NDC) is embedded in the Global Trade Item Number (GTIN). Using mapping tables, the manufacturer can be determined from the NDC Code. The NDC and manufacturer data elements are later transmitted to an IIS by cross walking/mapping from the GTIN. The software system records this information as structured data elements.

Evaluation Criteria

The tester Verifies that there is a choice for VFC stock as she is VFC Eligible. The coded values are not expected to be displayed to the user, but it is expected that the value selected has the identified meaning, and it is expected that the system will use the coded value when the attribute is conveyed in later transactions:

The EHR records the following vaccine administration information, and using the 2D Bar code found on the Unitof-Use for vaccine administration, automatically populates the Vaccine Type/product administered, the expiration date and the lot number:

Entered BY	Sandra Molina
Ordering Provider	Frank Smith
Entering Organization	Shoreline Pediatrics
Vaccine Event information source (Administration Notes)	New immunization record (NIP001 00)
Value/Text for Vaccine Type	Influenza, injectable, quadrivalent, preservative free, pediatric (CVX 161, NDC 49281-0521-00)
Vaccine 2D Barcode	
Date/Time of Start of Administration	Current Date
Date/Time of Start of Administration Administered Amount (of Vaccine)	Current Date 0.5
Administered Amount (of Vaccine) Administered Units (of Measure) Administering Provider	0.5
Administered Amount (of Vaccine) Administered Units (of Measure)	0.5 mL
Administered Amount (of Vaccine) Administered Units (of Measure) Administering Provider	0.5 mL Sandra Molina
Administered Amount (of Vaccine) Administered Units (of Measure) Administering Provider Administered-at Location	0.5 mL Sandra Molina 400 Shoreline Drive, Stamford Connecticut 06901
Administered Amount (of Vaccine) Administered Units (of Measure) Administering Provider Administered-at Location Lot Number	0.5 mL Sandra Molina 400 Shoreline Drive, Stamford Connecticut 06901 8L4B3521
Administered Amount (of Vaccine) Administered Units (of Measure) Administering Provider Administered-at Location Lot Number Substance Expiration Date	0.5 mL Sandra Molina 400 Shoreline Drive, Stamford Connecticut 06901 8L4B3521 12/31/2022
Administered Amount (of Vaccine) Administered Units (of Measure) Administering Provider Administered-at Location Lot Number Substance Expiration Date Substance Manufacturer Name	0.5 mL Sandra Molina 400 Shoreline Drive, Stamford Connecticut 06901 8L4B3521 12/31/2022 Sanofi Pasteur Inc (PMC)

Notes

The EHR does not need to specify a 'new immunization', as long as there is a way to indicate that it is a new immunization within the EHR, this is acceptable (e.g. the default interpretation of the data entry is that it is a new immunization and not historical).
