Description

Following the vaccination visit, the patient/parent uses the specified interface to print the immunization report for the patient including all history and forecast information.

Comments

No Comments

Pre-condition

Initial Data Load completed with demographic data, vaccination history, and clinical history. Historical Vaccination reconciled and loaded into the EHR. New vaccinations have been administered. The parent/patient is provided with an account to access the immunization history.

Post-Condition

The patient/parent has been provided a printed copy of the patient immunization history report.

Test Objectives

Provide Access to Patient Immunization Record: The EHR or other clinical software system provides patients and their authorized representatives with electronic access to immunization records (either directly or by interacting with an external system such as a patient portal).

Provide Access to Printable Immunization Record: The EHR or other clinical software system provides a printable version of the immunization record.

Evaluation Criteria

Using the patient facing features (e.g. portal), show that the vaccine history including today's vaccine/forecast can be printed:

The following patient demographics are included in the printable report:

| Patient Identifier Number: | Vendor Assigned |
|-------------------------------|--|
| Patient Identifier Type Code: | Vendor Assigned |
| Patient Name: | Juana Mariana Vazquez |
| Date/Time of Birth: | 11/01/2017 11:05am |
| Sex: | Female |
| Patient Address: | 4345 Standish Way, Stamford, CT, 06903 |
| Multiple Birth Indicator: | No |
| Birth Order: | N/A |

The following Vaccination History is available in printed report:

| Vaccine Group: | Hep B Peds NOS |
|---------------------------|---|
| Administered: | hepatitis B vaccine, pediatric or pediatric/adolescent dosage (CVX 08) ENGERIX-B (NDC 58160-0820-43) |

Notes

If the same immunization report verified in TestCase 4 for Juana Mariana Vazquez is used for the patient access to the immunization record, then content verification does not need to be repeated.

Influenza vaccine should be due between September and October of the flu season, which may show as the prior year to testing or the year of testing.

Also, since MMR was given 2 weeks prior, forecasting of immunizations due may be adjusted by the vendor forecast to account for the requirement there must be at least 28 days between immunizations using a live virus. Tester should document incidences where the forecast is adjusted or annotated as a result of this requirement.
