Description

The user responsible for the EHR configuration updates the system with new CVX, NDC, and VIS vaccine codes.

Comments

No Comments

Pre-condition

The EHR configuration needs updating with new vaccine information.

Post-Condition

The CVX, NDC, and VIS codes for the new vaccine is available in the EHR to document the administration of this new product.

Test Objectives

Add new vaccine codes: This includes vaccine codes (CVX), National Drug Codes (NDC), and Vaccine Information Statement codes (VIS).

Evaluation Criteria

The EHR vendor demonstrates the mechanism to add the following new vaccine information:

Vaccine Name:	COVID-19-Substitute (CV19SUB)
CVX:	24
NDC:	00006-1101-99
VIS Fully Encoded Text-String	253088698300002811180321
VIS Publication Date	10/1/2020

Notes

These codes will be used to administer the new vaccine in later test steps. Until new codes or test codes are assigned for COVID-19 vaccines, this test will substitute anthrax vaccine concepts to assure valid codes will be used in the message.

It is acceptable to demonstrate without saving the information, and a substitute vaccine will be used later in the testing.

Should additional content be needed to complete the new record, the vendor may supply this detail, and the tester will document such information to inform future updates.

The vendor may need to show the screens and omit the commit action. If so, a substitute vaccine may be leveraged for later steps.

The tester shall document any additional comments or concerns identified by the vendor

The new vaccine information needs to be added before inventory can be added for a specific vaccine.
