**Description**

A patient is seen at a clinic. A new administration is recorded. The IIS is able to process the administration message but finds a soft error (warning) which it returns in the acknowledgement message.

**Comments**

The test case simulates the IIS issuing an acknowledgement warning due to an internal warning even though the message is valid.

**Pre-condition**

No PreCondition

**Post-Condition**

The returned warning must be visible in the EHR-S.

**Test Objectives**

The test case targets the EHR-S capability of supporting OIDs (e.g., in MSH-3 and for assigning authorities) for administered message and assesses the ability of the EHR-S to accept an acknowledgement message with a soft error (warning) being returned by the IIS.

**Evaluation Criteria**

Administered Message: Validation Report with no Errors
Acknowledgement Message: An indication of a warning (See Juror Document)

**Notes**

No Note
